

[CDG Environmental, LLC](#), producers of proprietary, highly-engineered chlorine dioxide chemistries, announces the Organic Material Review Institute, OMRI, listing of our product, [CDG Solution 3000](#). [CDG Solution 3000](#) has successfully completed the OMRI product review process and has been listed on the OMRI website www.omri.org. Being listed on the OMRI product list means that [CDG Solution 3000](#) can be used in certified organic production or food processing or handling according to the USDA National Organic Rule Program.

[CDG Solution 3000](#) is an ultra pure liquid chlorine dioxide that is shelf stable for 9 months and is the only such product that can be shipped by common carrier or rail. Chlorine dioxide is a proven, powerful, environmentally friendly oxidizing biocide. In the past, the use of chlorine dioxide has been constrained by the molecule's inherent instability, which has necessitated its on-site production at point-of-use. CDG's proprietary chemistries resolve the fundamental technical challenges that historically have limited the use of chlorine dioxide. Most significantly, [CDG Environmental, LLC](#) has created the first and only storage-stable, ready-to-use liquid chlorine dioxide biocide, [CDG Solution 3000](#), which eliminates the need for on-site production.
